REVIEWERS:

Stoliarchuk Ya.M. – Doctor of Economics, Professor, Head of the Department of International Economics, Kyiv National Economic University named after Vadym Hetman

Zvarych I.Ya. – Doctor of Economics, Professor, Head of the Department of International Economics, West Ukrainian National University

This monograph is devoted to the study of conceptual and applied aspects of the formation of the European Union's green economy in the context of global post-industrial transformations. It examines the theoretical foundations of the emergence of the green economy within the framework of sustainable development and explores the strategic principles of the European Green Deal as a dominant guideline for Ukraine's European integration.

The work identifies global and European manifestations of the greening of reproductive economic processes and analyzes the determinants of the EU's leading advancement in shaping integration benchmarks for Ukraine. The monograph substantiates the prospects for applying institutional and financial instruments of green transformation in the Ukrainian economy.

The monograph has both theoretical and practical significance, combining an analysis of contemporary integration processes with the development of recommendations for Ukraine's public policy in the field of green economy. The publication is intended for researchers, higher education students, experts, as well as representatives of public authorities and local self-government interested in sustainable development and European integration.
